### Abstract of WO 2004063172 (A1)

The invention relates to the use of 2-amino-2H-quinazoline derivatives of general chemical formula (I), wherein R1 represents an alkyl group having 1 - 5 carbon atoms and R2, R3, R4 and R5 independently represent a chlorine or hydrogen atom, in addition to the pharmaceutically compatible salts thereof for producing therapeutic agents for treating myeloproliferative diseases, high blood pressure and bronchodilation.
